

COVID-19 Mitigation Plan

Employees, Contractors, Temporary Staffing, Volunteers, Participants, and Visitors

This update effective August 17, 2021

NOTE: Connecticut's Health Department issued a recommendation Thursday (7/29) that residents go back to wearing masks indoors when in Hartford, New Haven or New London Counties and said evidence suggests the state is entering into another wave of the pandemic.

The department said all three counties have been downgraded into the category of "substantial transmission" areas under the classification system set up by the U.S. Centers for Disease Control and Prevention.

The department said the mask-wearing recommendation holds for everyone in those counties, regardless of vaccination status.

Critical Employee Responsibilities

- 1. Get Vaccinated
- 2. Where a mask indoors regardless of your vaccination status
- 3. Stay home if you are ill
- 4. Report concerns, ideas, and suggestions to: covidsuggestions@favarh.org

Section I

What to Do If You Have Symptoms

1. STAY HOME IF YOU ARE SICK

- a) ALL Employees, Participants, and Visitors should selfmonitor for symptoms daily and BEFORE they leave for Favarh. Employees, Participants, and Visitors must be <u>free of fever</u> (100° F or less w/oral or ear thermometer, 99° w/forehead) and other COVID symptoms without the use of fever-reducing or other symptom-altering medicines (e.g. cough suppressants). If you don't have an oral thermometer, Favarh will provide one on request.
- b) UNVACCINATED INDIVIDUALS who have COVID symptoms must quarantine, notify Favarh, and get a COVID Test. A negative PCR test will be required prior to return. Click <u>here</u> for Testing Locations near you or go to <u>http://www.211ct.org/covidtesting</u>.

2. CONTACT TRACING

 a) When an UNVACCINATED INDIVIDUAL becomes presumptive with COVID symptoms, or when ANYONE tests positive for COVID-19, contact tracing must occur to identify people who have had *Close Contact*¹ with them 48 hours prior to the onset of their symptoms OR 48 hours prior to their test sample time/date, whichever is earlier.

3. CLOSE CONTACT & TESTING/MONITORING

a) ALL employees and participants, regardless of vaccination status, should obtain a PCR COVID test after Close Contact with a person with confirmed COVID test results and monitor for symptoms. Test 3-5 days after exposure.

4. QUARANTINING:

a) FULLY VACCINATED individuals who are immunocompromised (see Figure 1) should quarantine and follow the recommendations provided by their healthcare provider.

SYMPTOMS OF CORONAVIRUS

People with COVID-19 have had a wide range of symptoms reported – ranging from mild symptoms to severe illness.

Symptoms may appear 2-14 days after exposure to the virus. People with these symptoms may have COVID-19:

- Fever or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

This list does not include all possible symptoms. CDC will continue to update this list as they

¹ Close Contact (6 feet or less) for cumulative time of <u>15 minutes</u> or more in a 24-hour period. See Close Contact in Glossary for more details.

- b) FULLY VACCINATED and non-immunocompromised individuals do not need to quarantine unless they develop symptoms. Fully Vaccinated Individuals who are symptomatic must quarantine for 10 days following the onset of symptoms or a positive PCR COVID test, whichever is earlier. If a negative PCR COVID test is obtained, the individual can end the quarantine and return to Favarh after they have been symptom free for 24 hours.
- c) UNVACCINATED and must quarantine for 10 days following the last close contact with a COVID positive or presumptive individual. Quarantine can end early if the person they came into contact with was presumptive and that individual subsequently tests negative.

5. RETURNING TO FAVARH

- a) Individuals who are home with symptoms may return to work after a negative COVID PCR test AND after they have been symptom-free for 24 hours (we don't want to spread non-COVID germs either).
- b) **Individuals who have tested positive** for COVID may return to Favarh after they have received two negative tests in a row, 24 hours apart, OR until **ALL** of the following <u>3 things</u> have happened:
 - i. At least 10 days have passed since their symptoms first appeared; AND
 - ii. They have been <u>free of fever</u> (100° F or less w/oral or ear thermometer, 99° w/forehead) for at least 24 hours without the use of fever-reducing or other symptom-altering medicines (e.g. cough suppressants); AND
 - iii. Any other symptoms have improved (for example, cough or shortness of breath).
- c) Individuals who have tested positive for COVID AND who need to convalesce for more than 10 days may not return to Favarh unless they have received two negative tests in a row, 24 hours apart, OR until ALL of the following <u>4 things</u> have happened:
 - i. At least 10 days have passed since their symptoms first appeared; AND
 - ii. They have been free of fever (100° F or less w/oral or ear thermometer, 99° w/forehead) for at least 24 hours without the use of fever-reducing or other symptom-altering medicines (e.g. cough suppressants);
 - iii. Other symptoms have improved (for example, cough or shortness of breath); AND
 - iv. A return to work note from a healthcare provider.

Section II

PREVENTION STRATEGIES

1. SCREENING & REENTERING PROGRAMS

- a) Screening at Favarh facilities and vehicles should continue for all guests and visitors (regardless of vaccine status), unvaccinated employees, unvaccinated volunteers, and unvaccinated participants. Only fully vaccinated employees and participants who have provided documentation to Human Resources (staff) or to Program (participants) do not need to screen.
- b) Individuals who have been out of work or program for two weeks or more must either show proof of vaccination or a negative COVID test administered within 5 days (prior to their return).

2. MASK WEARING

- a) ALL must wear a mask in the following situations:
 - i. ALL INDOOR SETTINGS except when alone in a private office.
 - ii. In group home settings (residents to not need to wear a mask in their own home).
 - iii. In vehicles with more than one person (including the driver).
 - iv. Businesses and public settings that require mask wearing by all (e.g., schools, medical facilities, etc.).
 - v. During procedures or medical care where it is required (e.g. aerosol generating procedures) along with other required PPE.
 - vi. When working with immunocompromised participants. Many conditions and treatments can cause a person to be immunocompromised or have a weakened immune system. Primary immunodeficiency is caused by genetic defects that can be inherited. Prolonged use of corticosteroids or other immune weakening medicines can lead to secondary or acquired immunodeficiency. If unsure, check with a Favarh nurse.

FIGURE 1

Get more information on immunodeficiency

- <u>Types of Primary Immune Deficiency</u>
- The Jeffrey Modell Foundation
- Immune Deficiency Foundation
- Primary Immunodeficiency (PI) | CDC
- b) UNVACCINATED must wear a mask in the following situations:
 - Indoor settings.
 - Outdoor settings when keeping socially distant from others is difficult or not practical.
 - All settings when working with individuals who are unvaccinated or immunocompromised.
 - Not wearing a mask when you are not fully vaccinated in the presence of program members or residents is considered **NEGLECT** by DDS.
- c) VACCINATED individuals have the option of wearing a mask in all situations other than those listed in 2 a) above.
- d) Nothing in this section shall require the use of a mask or cloth face covering by anyone for whom doing so would be contrary to his or her health or safety because of a medical condition. Any person who declines to wear a mask or face covering because of a medical condition shall be exempt from any requirement to wear a mask **but only if such person provides written documentation** that the person is qualified for the exemption from a licensed medical provider, the Department of Developmental Services or other state agency that provides or supports services for people with emotional, intellectual or physical disabilities, or a person authorized by

any such agency. Such documentation need not name or describe the condition that qualifies the person for the exemption.

3. Meals

a) Mealtimes should be scheduled and planned in an effort to avoid close contact between diners. Employees should find a space at least 6' from others while eating and minimize talking, singing, etc. while unmasked and eating in the same room as others, even when socially distanced. Eating outside or in a private indoor space is best when possible.

4. VACCINATIONS

Getting vaccinated is the best thing you can do to protect yourself, your family, and the people you work with at Favarh from the COVID-19 virus. Always check with your PCP or other medical professional when making your decision. Vaccine FAQ's can be found <u>here</u>.

- a) Full Vaccination within 90 days of hire is a "condition of hire" for all employees hired on or after March 12, 2021.
- b) Vaccine cash incentives will remain in place for all employees hired before March 12, 2021 and up until 12/31/21 or until full approval of one or more COVID vaccines, whichever is earlier.

5. COHORTING AND SOCIAL DISTANCING

- a) Unvaccinated participants who cannot wear a mask must be placed in mask-wearing and/or vaccinated cohorts with no more than one (1) unvaccinated and non-mask wearing member per cohort.
- b) Participants who are immunocompromised should continue to cohort with vaccinated and/or mask wearing cohorts.

Face Mask Use Guidelines

Setting → Mask Quality/Durability ↓	Residential setting/ symptoms in residential setting	Residential setting/ no symptoms in residential setting	Program and other Non-residential settings	Thrift Shop
N95 (no vent version) Fit tests are required for proper usage (see Section II).	Staff working in immediate space of symptomatic person (e.g., providing care, cleaning room, serving meals, etc.)	Staff working with someone who is undergoing *aerosol producing treatments.	Staff working with someone who is undergoing *aerosol producing treatments.	
KN95	Alternative to N95 masks when they are in short supply	Alternative to N95 masks when they are in short supply	Alternative to N95 masks when they are in short supply	
Surgical Masks	Unvaccinated Staff	Unvaccinated Staff	Unvaccinated Staff	Unvaccinated volunteers Unvaccinated customers (honor system)
Cloth Masks: At least double-layered cotton or cotton blend. <u>Bandanas</u> and <u>gaiter</u> are NOT acceptable.	For unvaccinated staff who have underlying breathing issues or allergy issues and can't wear surgical Masks.	For unvaccinated staff who have underlying breathing issues or allergy issues and can't wear surgical Masks.	For unvaccinated staff who have underlying breathing issues or allergy issues and can't wear surgical Masks.	Unvaccinated volunteers Unvaccinated customers (honor system)

<u>Aerosol Producing Treatments</u>: e.g, nurses providing care of a tracheostomy, suctioning an individual (this does not include tooth brushing with suction), nebulizer treatments, assisting or when in the room with a person using a CPAP or BiPAP machine for sleep apnea or other medical condition, and/or when administering CPR (cardiopulmonary resuscitation) utilizing bag-mask ventilation (BMV or ambu-bag). Plan needed for fit-testing. (1 mask/staff/shift)

- <u>N95 or KN95</u>: These are the only masks that provides adequate <u>protection for the wearer</u> (assuming proper fit and use). Anyone working in the immediate vicinity (within 6 feet or in the bedroom) of a symptomatic person needs to be wearing one of these along with other appropriate PPE. Only no-vent versions are permitted (N95's with vents are for industrial use, not medical use).
- <u>All Other Masks</u>: All other masks, including surgical masks, only reduce the spread of the virus by the wearer, primarily from coughs and sneezes. **They don't provide complete protection for the wearer**. The different types of other masks block the spread of droplets from coughs, sneezes, and exhales to one degree or another. Bandanas and gaiters are not permitted.

Section III

TRAVEL, MEETINGS, ACTIVITY GUIDE, VISITATION,

1. Travel and Meetings (program and work related)

- a) There is no out-of-state work or program-related travel until further notice.
 - i. Residents may travel out of state with family.
- b) Employees should not attend meetings, conferences, or other group gatherings of any size outside of Farmington Valley towns² until further notice.
- c) Carpooling between employees who are fully vaccinated is permitted but masks are required in the vehicle.

3. ACTIVITY GUIDE Fully Vaccinated and Unvaccinated

Tuny vacchated and envacen

Effective June 4, 2021

- 1. No limitations except in-state only.
- 2. Must follow all mask requirements.
- 3. See Choosing Safer Activities chart on the next page.

4. Residential Visitation by Family and Friends

- a) Group Home Settings with Immunocompromised Residents (as determined by Favarh nursing)
 i. Outdoor visits only.
- b) All Other Group Home Settings
 - i. Indoor okay if fully vaccinated and masked.
 - ii. Outdoor okay for all others. Mask guidelines must be followed.
- c) Apartment Settings
 - i. No limitations except mask guidelines must be followed.

² Farmington Valley Towns: Avon, Simsbury, Canton, Farmington, Burlington

Section VIII

ADDITIONAL PLAN COMPONENTS

1. **<u>TESTING</u>**:

- a) COVID tests are required for <u>Day Program</u> participants who are unvaccinated prior to returning to program or after being out of program for 2 weeks or more.
- b) Testing is required for employees, participants, and volunteers who are symptomatic or have had close contact with a person with confirmed COVID test results. Test 3-5 days after exposure.
 i. COVID-19 PCR tests should be used in both scenarios.
- 2. **TRAINING**: Additional training, communication, and guidance provided in response to COVID-19.
 - a) Online training (mandatory, all employees): Aspects of Infectious Diseases, Infection Control and Prevention, Personal Protective Equipment, and Hand Washing Procedures.
 - b) Written updates of CRP/COOP and Reopening plans sent to all employees (3/15 current).
 - c) Other guidelines posted, emailed, or otherwise available to all employees: Screening protocols, Facemask Guidelines, COVID-19 symptoms, Hand Washing posting, Stay Home if You're Sick posting, PPE donning and doffing posting and more.
 - d) Individualized training on PPE donning and doffing by Nurses.
 - e) Practice donning and doffing full PPE at each location coordinated by Managers.
 - f) Individualized training for Participants for proper mask wearing.
 - g) In-person training classes may be discontinued from time to time based on outbreak status.

2020 Favarh COVID Response Team (CRT)

Additional Documents Associated with this Plan (all documents filed on Directors drive)

- 1. Screening Check list and Sign in.
- 2. Respirator Seal Check
- 3. <u>COVID Testing Guidelines</u>

This plan and related policies will be updated as new information is gathered.

Plan original date: 3/15/2020

Revision dates: 3/16/20, 3/17, 3/18, 3/26, 3/27, 4/1, 4/2, 4/3, 4/10, 4/15, 4/22, 4/28, 5/4, 5/7, 6/8, 7/2, 7/10, 7/17, 7/29, 8/7, 10/1 (working draft), 11/18, 11/24, 1/1/21, 6/4, 6/11, 8/13, 8/17

Glossary

Close Contact: For COVID-19, a close contact is defined as any individual who was within 6 feet of an infected person for cumulative time of 15 minutes or more in a 24-hour period starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to positive specimen collection) until the time the patient is isolated.

Cohorting: At Favarh, this is the practice of grouping people and limiting interactions with others when there has been a possible close contact exposure.

Contact Tracing: In public health, contact tracing is the process of identification of persons who may have come into contact with an infected person and subsequent collection of further information about these contacts.

COVID-19: Favarh is responding to a pandemic of respiratory disease spreading from person to person caused by a novel (new) coronavirus. The disease has been named "coronavirus disease 2019" (abbreviated "COVID-19"). This situation poses a serious public health risk. COVID-19 can cause mild to severe illness; most severe illness occurs in adults 65 years and older and people of any age with serious underlying medical problems.

Direct Transportation: In GSE, when the DSP picks up workers directly at their home and transports them directly to the work site and back again without stopping at Favarh.

Essential Employees: Essential employees at Favarh include those employees providing healthcare and homecare services to Favarh residents in group homes and apartments. In addition, those employees engaged in essential business operations, finance, cleaning, maintenance, and various supports to our residential facilities such as shopping, cooking, resupplying, restocking, deliveries, and training for back up and relief staff.

Essential Visitors: These will include critical medical, maintenance, and emergency personnel.

Isolation: keeps someone who is infected with the virus away from others, even in their home.

Mitigation: Things that can be done and behaviors that can be changed to reduce the risk of spreading Isolate-in-Bedroom: Favarh's practice of isolating a resident who is Presumptive in their bedroom and following special Mitigation protocols.

Personal Protective Equipment (PPE): Personal protective equipment included protective coverings such as masks, gloves, goggles, and other garments and/or equipment designed to protect the wearer's body from infection.

Presumptive: Anyone exhibiting "Frequent" or "Sometimes" symptoms (see chart below) as "presumptive" or assumed COVID-19. See Exception Protocol, Appendix C. Also include Persons Under Investigation (PUI).

Quarantining: keeps someone who might have been exposed to the virus away from others, even in their home.

Shelter-in-Place: Favarh's practice of keeping our residents at home even though they are COVID-free and have not been exposed to someone who is symptomatic or COVID+. This is a precautionary measure to mitigate the risk of infection to our more vulnerable residents.

Vaccine: One of several FDA approved COVID-19 vaccines authorized for use. Information about Connecticut's vaccination program can be found <u>here</u>. While the vaccine will not initially be mandatory for Favarh employees, contractors, and volunteers, it may be in the future.
